

artworks **FOUNDRY**

We have gone over this many times with the DPW, and they agree that our plaques are already slip resistant. We had extensive testing done previously, they should remember that, if they need to see something I can send the approval from them from past plaque projects.

Here is an email from before:

Hello James,

Here is the correspondence about slip resistance and the testing. We had tried applying a coating but it was found to be not necessary as the bronze is resistant enough. Let me know if you need anything else to prove the point.

Thanks,
Tom

Tom,

Any update on delivery?

I think slip coating can be omitted for now as slip resistance test showed that uncoated plaques met requirement. Contractor plans on installing on
