

INFORMATION SHEET

NO. G-20

DATE : January 24, 2024

CATEGORY : General

SUBJECT : **Interim Criteria - Building Permit Application Routing to City Agencies**

PURPOSE : To establish interim criteria for determining when building permit applications and permit revisions are to be referred by the Department of Building Inspection to other City agencies for their review and approval prior to permit issuance.

**SECTION(S)
INVOLVED** : **San Francisco Building Code, Section 106A**

DISCUSSION :

(A) This Information Sheet supersedes all previously issued documentation on routing.

Since the routing criteria changes according to the needs of the various City Agencies, it is necessary to update the routing criteria from time to time.

To report any error/omissions in the Information Sheet, please contact Technical Services Division by email: techq@sfgov.org.

(B) Building Permit Application processing:

Building permit applications, renewals of expired permits, and permit revisions that fall under the categories listed in Attachment 1 shall be referred by the Department of Building Inspection to the specified agencies for review.

Building permit applications, renewals of expired permits, and permit revisions that are not within these categories need not be referred to other agencies unless DBI staff believes that referral is necessary to assure adequate and complete plan review or unless another agency specifically requests the referral of a permit application, renewal or revision.

The intent of this Information Sheet is to provide for the proper referral and review of building permit applications and permit renewals and revisions, including related submittal documents, to City agencies having jurisdiction over proposed elements of the project. The referral of building permit applications and permit renewals and revisions to appropriate City agencies for review is recognized as an important component of the plan review process.

City agencies not responsible for approval of permit applications, such as San Francisco Unified School District, will not typically have applications or revisions routed to them for review, although agencies that are responsible for collection of fees relating to construction may review applications for fee determinations prior to permit issuance.

Building Permit Applications that fall within the categories listed in Attachment 1 are to be referred to the agency under which the category is listed.

INFORMATION SHEET G-20

When a permit that was previously issued has expired with no work started, a permit application to renew such previously issued permit should be referred to other agencies as follows in accordance with the items noted in Attachment 1:

1. Planning Department (Planning) which is also known as City Planning – Zoning Counter (CP-ZOC)
2. Department of Building Inspection: Architectural and Structural Plan Review (BLDG)
3. Department of Building Inspection: Mechanical Plan Review (MECH) / Electrical Plan Review (MECH-E)
4. Fire Department (SFFD)
5. Department of Public Works, Bureau of Street-Use and Mapping (BSM)
6. Public Utility Commission (PUC)
7. Office of Community Investment and Infrastructure (OCII) which is the successor agency to the SF Redevelopment Agency (REDEV)
8. Department of Public Works, Office of Disability Access Coordinator (PW-DAC)

(C) Routing to Department of Public Health (DPH). See attachment 3.

Notes:

1. New construction, seismic retrofit or remodel of buildings under DPH programs (see attachment 3) needs to be routed to DPH.
2. Retail projects involving Food Facility needs to be routed to DPH.
3. For onsite consumption in Medical Cannabis Dispensing (MCD) facilities, the permit will be routed to DPH first before Planning.
4. Do not route Article 38 (enhanced ventilation system) construction plans to DPH

(D) Routing to Planning and Others (for site permit and addendum)

Planning shall be the first station for site permit.

For new buildings, architectural addendum needs to be routed to Planning, BSM and PUC even if no changes from the site permit. Planning shall be the last station for architectural addendum.

For existing buildings, unless specially requested by Planning, architectural addendum need not be routed to Planning if no changes from the site permit.

(E) In OCII areas, permits will be routed to OCII instead of to Planning. OCII is the last station to review. Note that OCII reviews all permit addenda.

(F) Major changes on issued Site Permit

1. File new permit application form 3/8 as altered site permit.
2. Route to Planning for review/approval (with reference drawings of the original site permit).
3. Set of altered site permit plus reference drawings will be assigned to the original plan reviewer.
4. Original site permit shall remain active paired with altered site permit.
5. If any addendum of the original site permit has been issued, no altered site permit will be allowed.
6. All addenda shall be under the altered site permit.
7. Fees due by the issuance of all addenda shall be based on both the altered site permit and the original site permit.
8. The Certificate of Final Completion (CFC) of both the altered site permit and the original site permit shall be issued together at the same time.

(G) Routing to Fire for buildings of R3 occupancy

1. All site permit plans of new buildings need to be routed to SFFD for Fire Department access and Fire-flow analysis.
2. Sprinkler addendum need to be routed to SFFD. Other addendum, such as architectural, mechanical, etc., does not need to be routed to SFFD.
3. For additions or alterations, applicant needs to mark on the plans and application form one of the following:
 - a. **“Fire sprinklers not required.”** Routing to SFFD not required.
 - b. **“Fire sprinklers required.”** Routing to SFFD not required.
 - c. **“Fire sprinklers under separate permit.”** Routing to SFFD not required.
4. Vertical additions need to be routed to SFFD for Fire Department access.

Note: Once sprinkler plans are submitted, submit a copy of the approved architectural plans with the sprinkler plans only as a reference (not for further review)

(H) For coordination with the Department of Environment on demolition, see Information Sheet S-04.

(I) Routing to PW-DAC: Site permit and architectural addendum, (for new construction, alteration, addition, change in occupancy/use) on any City Project or project receiving public funds, needs to be routed to PW-DAC.

Applicable PW-DAC sign-off form needs to be scanned on to submittal set. For additional information on City Projects, see Information Sheet DA-02, pages 2 and 3.

(J) Kitchen/Bathroom Permit with No Plan: “No plan” permit application for remodeling of kitchen and/or bathroom need not be routed to SFFD. Building Plan Reviewer shall “N/A” the approval block for SFFD. Exception: see Attachment 2 and where cost of construction exceeds \$99,000 in Group R2 occupancy.

(K) All permits/plans with alternate water systems (greywater, reclaimed water and storm water detention) need to be routed to PID (Plumbing Inspection Division) for review at site permit.

(L) The marks “X”, “#”, “*”, “^”, “//”, “+” or “Ø” in Attachment 1 indicate that routing to the respective agency is required or as noted in the “COMMENTS” column.

(M) Building permits involving Group R2 with cost of construction of \$99,000 or more need to be routed to SFFD. (See Attachment 2)

(N) CON-BOND shall be added to routing if permit includes new construction, horizontal and/or vertical addition, and/or alteration for a proposed multi-residential building or proposed multi-residential mixed-use building that increases the existing unit count by ten (10) or more (Exception: Projects that are part of a Development Agreement, or that receive public funding in whole or in part, or that have an established Labor Agreement), shall have Issuance of only the main Building Permit application and of the first construction document held until the clearance is received from the Controller’s office. “First Construction Document” means the first addendum that authorizes the construction of the project, and shall not include permits or addenda for demolition, grading, shoring, or site preparation work.

- Attachment 2: San Francisco Fire Department AB 3.08
- Attachment 3: Department of Public Health Routing Checklist

INTERIM ROUTING PROCEDURES

The Matrix below shows the scope of works which require review by the applicable stations and departments. However, other departments or stations such as Building Inspection Division, Housing Inspection Division, Plumbing Inspection Division, Electrical Inspection Division, Disabled Access Division, and the Port Department may still require review for work listed below.

3.08 Sleeping Area Fire Alarm Requirements (2019)

Reference: San Francisco 2016 Ordinance 165-16; San Francisco 2021 Ordinance 077-21; 2019 SFFC Section 1103.7.6.1; 2013 NFPA 72 Section 18.4.5— “Sleeping Area Requirements”

Purpose: To clarify requirements to satisfy the 2016 CCSF Ordinance 165-16; 2021 CCSF Ordinance 077-21 and San Francisco Fire Code (SFFC) Section 1103.7.6.1.

Scope: Compliance shall include all residential buildings with three units or more with an existing fire alarm system. The building owner shall upgrade the fire alarm system (if necessary) to comply with sound level requirements for sleeping areas set forth in section 18.4.5.1 of NFPA 72 (2013 edition) as amended from time to time, upon any of the following:

(A) Before completion of work on a building permit with a cost of construction of \$99,000 or more, excluding seismic upgrade work required per the Existing Building Code.

(B) On or prior to July 1, 2023.

This San Francisco Fire Code section amended by SFBOS on 5/11/21, Ord. 210259, effective 6/10/21

2013 NFPA 72 Section 18.4.5.1

Where audible appliances are installed to provide signals for sleeping areas, they shall have a sound level of at least 15 dB above the average ambient sound level or 5 dB above the maximum sound level having a duration of at least 60 seconds or a sound level of at least 75 dBA, whichever is greater, measured at the pillow level in the area required to be served by the system using the A-weighted scale (dBA).

2013 NFPA 72 Section 18.4.5.2

If any barrier such as a door, curtain, or retractable partition is located between the notification appliance and the pillow, the sound pressure level shall be measured with the barrier placed between the appliance and the pillow.

2013 NFPA 72 Section 18.4.5.3

Effective January 1, 2014, audible appliances provided for the sleeping areas to awaken occupants shall produce a low frequency alarm signal that complies with the following:

- 1) The alarm signal shall be a square wave or provide equivalent awakening ability
- 2) The wave shall have a fundamental frequency of 520 Hz +/- 10 percent.

Specific SFFD Requirements:

1. If the existing fire alarm system has existing audible appliances that achieve the sound pressure level requirements of NFPA 72-2013 they shall be acceptable even if they do not produce Low-Frequency tones. An audibility test shall be performed by a licensed C-10 contractor to demonstrate audibility compliance. The test results shall be documented on an associated Department of Building Inspection "Fire Only" permit indicating the sound level of at least 75 dBA; measured at the pillow of each sleeping area using a calibrated and approved dBA meter.
2. When new audible appliances are required to meet the minimum 75dBA sound level, they shall be current CSFM listed Low-Frequency audible appliances.
3. Any fire alarm work associated with this bulletin shall comply with the applicable sections in SFFD Administrative Bulletin 2.01.
4. Wireless fire alarm system equipment shall be permitted to be used for this application per SFFD 2019 Administrative Bulletin 2.01 specific requirements.
5. If the **existing FACU is being replaced with a new FACU**, the following applicable requirements shall apply:

a) The primary power source for the Fire Alarm Control Unit (FACU) and remote power supplies shall be from a dedicated circuit. This circuit shall be labeled at both the electrical sub panel and on the inside of the FACU/Power supply door and be provided with a circuit lock (if it is not installed in a locked room). If the existing FACU and/or remote power supplies did not have dedicated power circuit(s), new dedicated circuit(s) must be provided for the new FACU and any remote power supply (if provided). The building owner shall be responsible to provide the dedicated power circuit(s) if required. The dedicated power circuit(s) shall be in accordance with the SFEC-2019 and be provided by a CA licensed electrical contractor (not required to be the same C-10 FA contractor performing the FA work).

b) Where applicable, a replacement FA system design shall differentiate the intent to meet current codes or replaced on a like-for-like basis per CSFM Code interpretation 12-001 and information bulletin dated 9/4/2008 (These two documents shall be scanned onto the FA permit plans).

c) Where an existing FA remote annunciator is not provided, a new LCD or LED annunciator may be voluntary provided at the main building entrance (SFFD response point) in an approved location per SFFD Administrative Bulletins 2.01, 3.01, and 3.02.

d) If not provided for the existing FA system, a new wireless communicator shall be required per AB # 2.01 Section VIII.

e) If the existing FA system does not have existing initiating devices per current codes to generate the activation of the FA notification system, additional initiating devices shall be required to be provided and installed per current codes. This will include both automatic and manual initiating devices. When the building is not fully sprinklered per NFPA 13 or NFPA 13R, new smoke detectors shall be installed in all interior corridors leading to dwelling units per the 2019 SF Building Code Section 907.2.9.5.

Exception: Existing Fire Alarm Boxes (Manual Pull Stations) which are installed at all required exits (within 5 feet to the entrance of each required exit) at higher elevation than 42"-48" AFF, shall be permitted to remain at their current elevation. If new manual pull stations are required to be provided at required Exits they shall be installed in approved locations within 5 feet to the entrance of each required Exit at 42"-48" elevation AFF.

g) If the existing FA system does not have current code complaint audible and visual notification system in common areas of the building outside the dwelling units, additional audible and visual appliance shall be provided in the common areas for general public notification per current applicable codes.

Exception 1: If existing unsynchronized strobes are provided in common areas and have CD rating coverage per NFPA 72, they shall not have to be replaced with new synchronized strobes. If the CD rating coverage of the existing strobes does not meet current NFPA 72-2016 requirements, they will have to be modified by selecting a higher CD rating or by replacing the existing strobes with new strobes.

Exception 2: If existing audible appliances such as horns, bells, sounders, speakers, etc. are provided in common areas and generate 15 dBA sound pressure level above ambient, they shall not have to be replaced with new audible appliances if they do not interfere with the Temporal-3 FA alert tone inside the dwelling units and sleeping areas. This will be verified by the Fire inspector at the time of inspection.

h) When the existing FACU is replaced but the existing initiating devices are not replaced, Compatibility Listing (backwards compatibility) between the new FACU and the existing initiating devices must be provided by the applicant and be placed on the FA permit plans. The plans shall indicate that a 100% test of all the fire alarm system functions plus 10% of all existing initiating devices is required per the approved FA Sequence of Operation Matrix (S.O.O.M.). All new/replacement fire alarm system devices and components (if provided) shall be 100% tested.

6. If any of the specific requirements above or any other applicable codes requirements are not clear or require further and specific SFFD interpretation, the building owner or the permit applicant may request to have a Pre-Application meeting with the SFFD by submitting a pre-application meeting request form--
