Civic Design Review

Terminal 3 West Modernization

COURTYARD 4 CONNECTOR [C4C]
CONCEPT PHASE

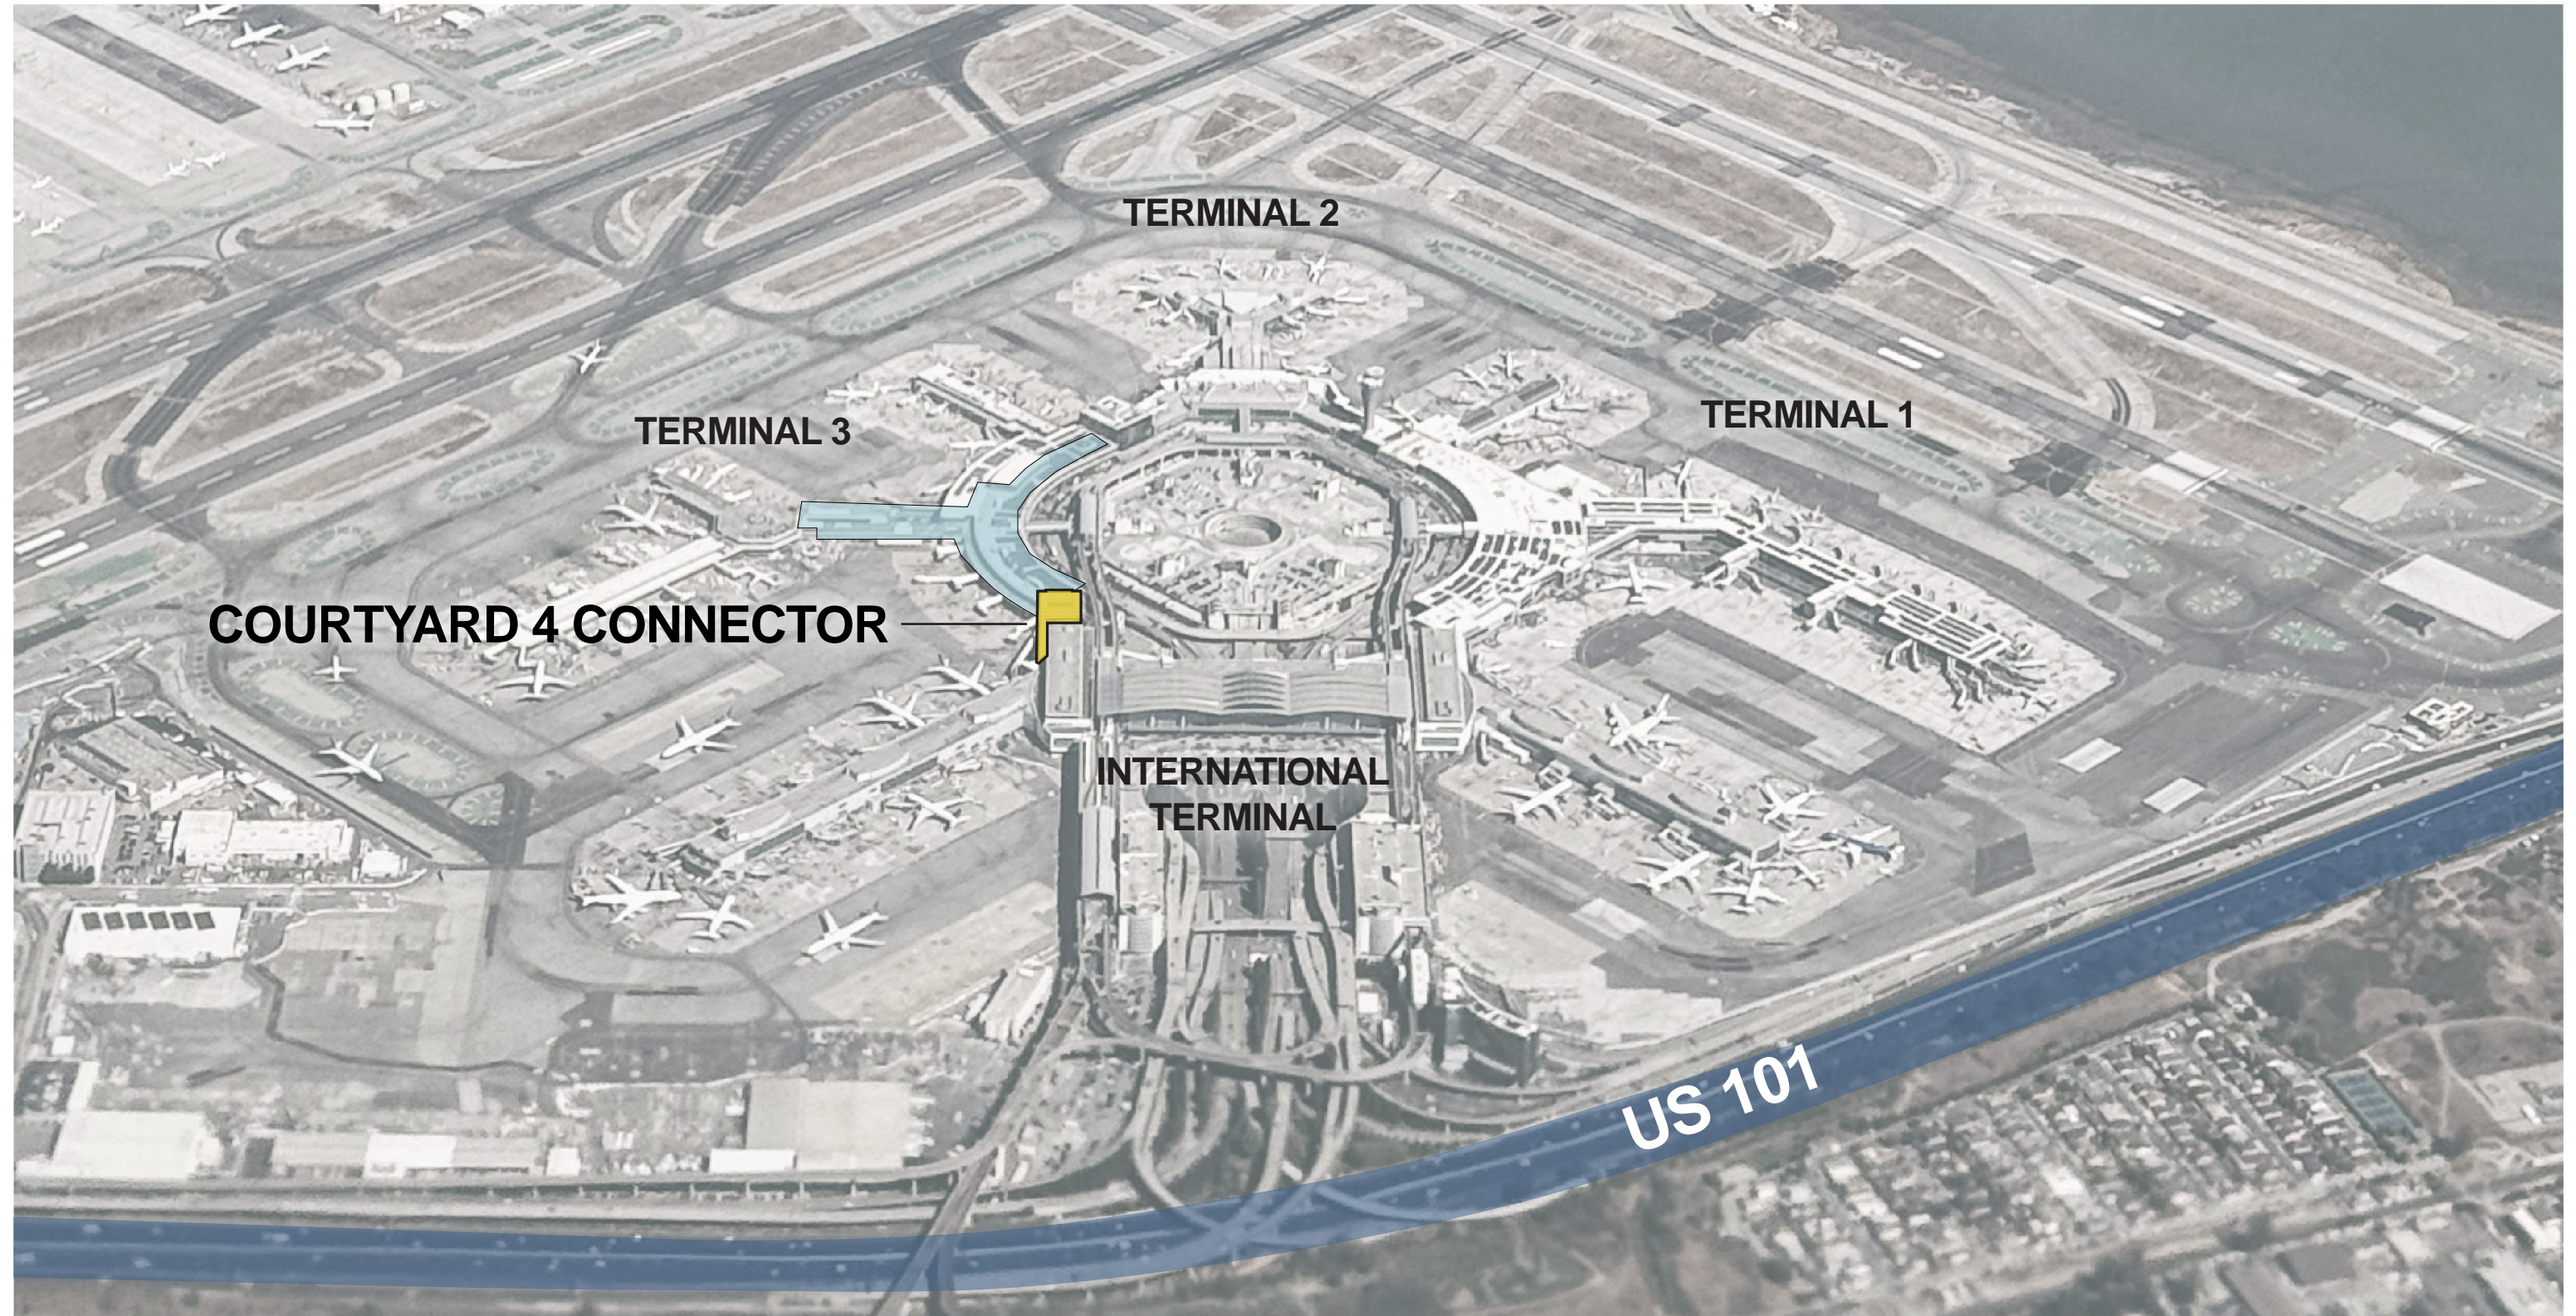

SAN FRANCISCO INTERNATIONAL AIRPORT

Contents

- A** Project Background / Goals
- B** Existing Conditions / Context
- C** Context / Massing Components

1

Optimize FIS Corridor and Secure Connection between T3 and ITB

- Shorten travel distances
- Add moving walkways
- Widen corridors for increased passenger loads

2

Expand Terminal 3 Check-In Lobby to accommodate higher operational demand for passenger processing and checked baggage

3

Provide Operational Tenant Space

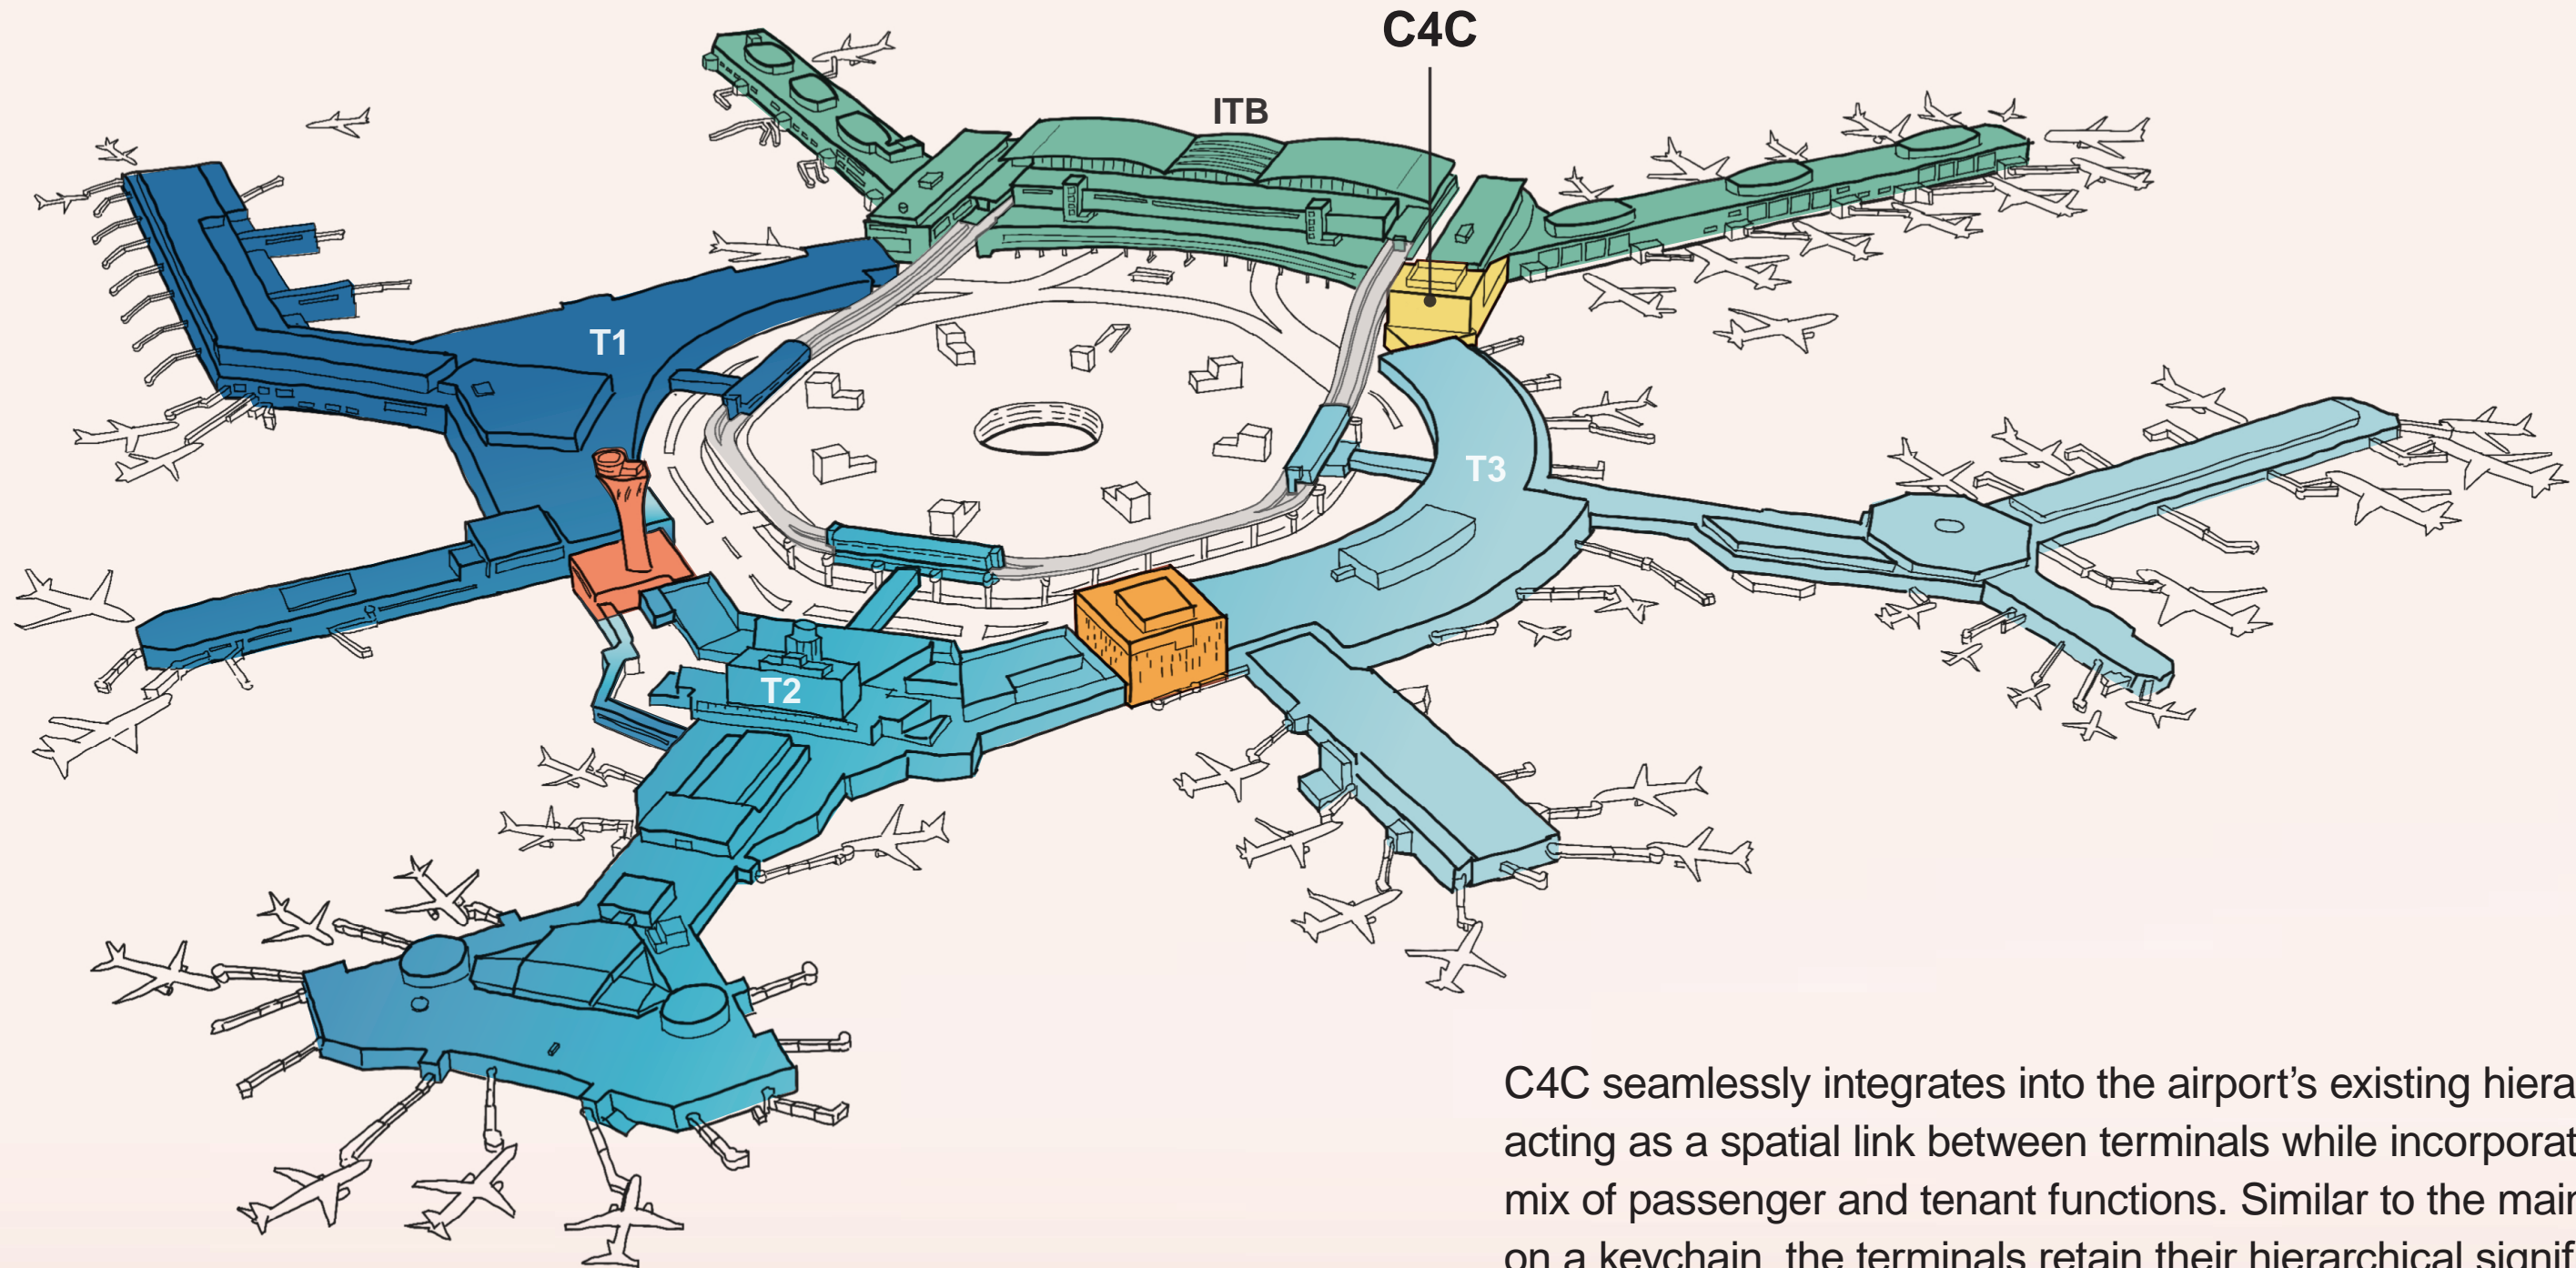

- Federal Agencies (TSA, FBI, DEA, CBP)
- SFO Security and Badging Functions
- SFO Landside Operations

4

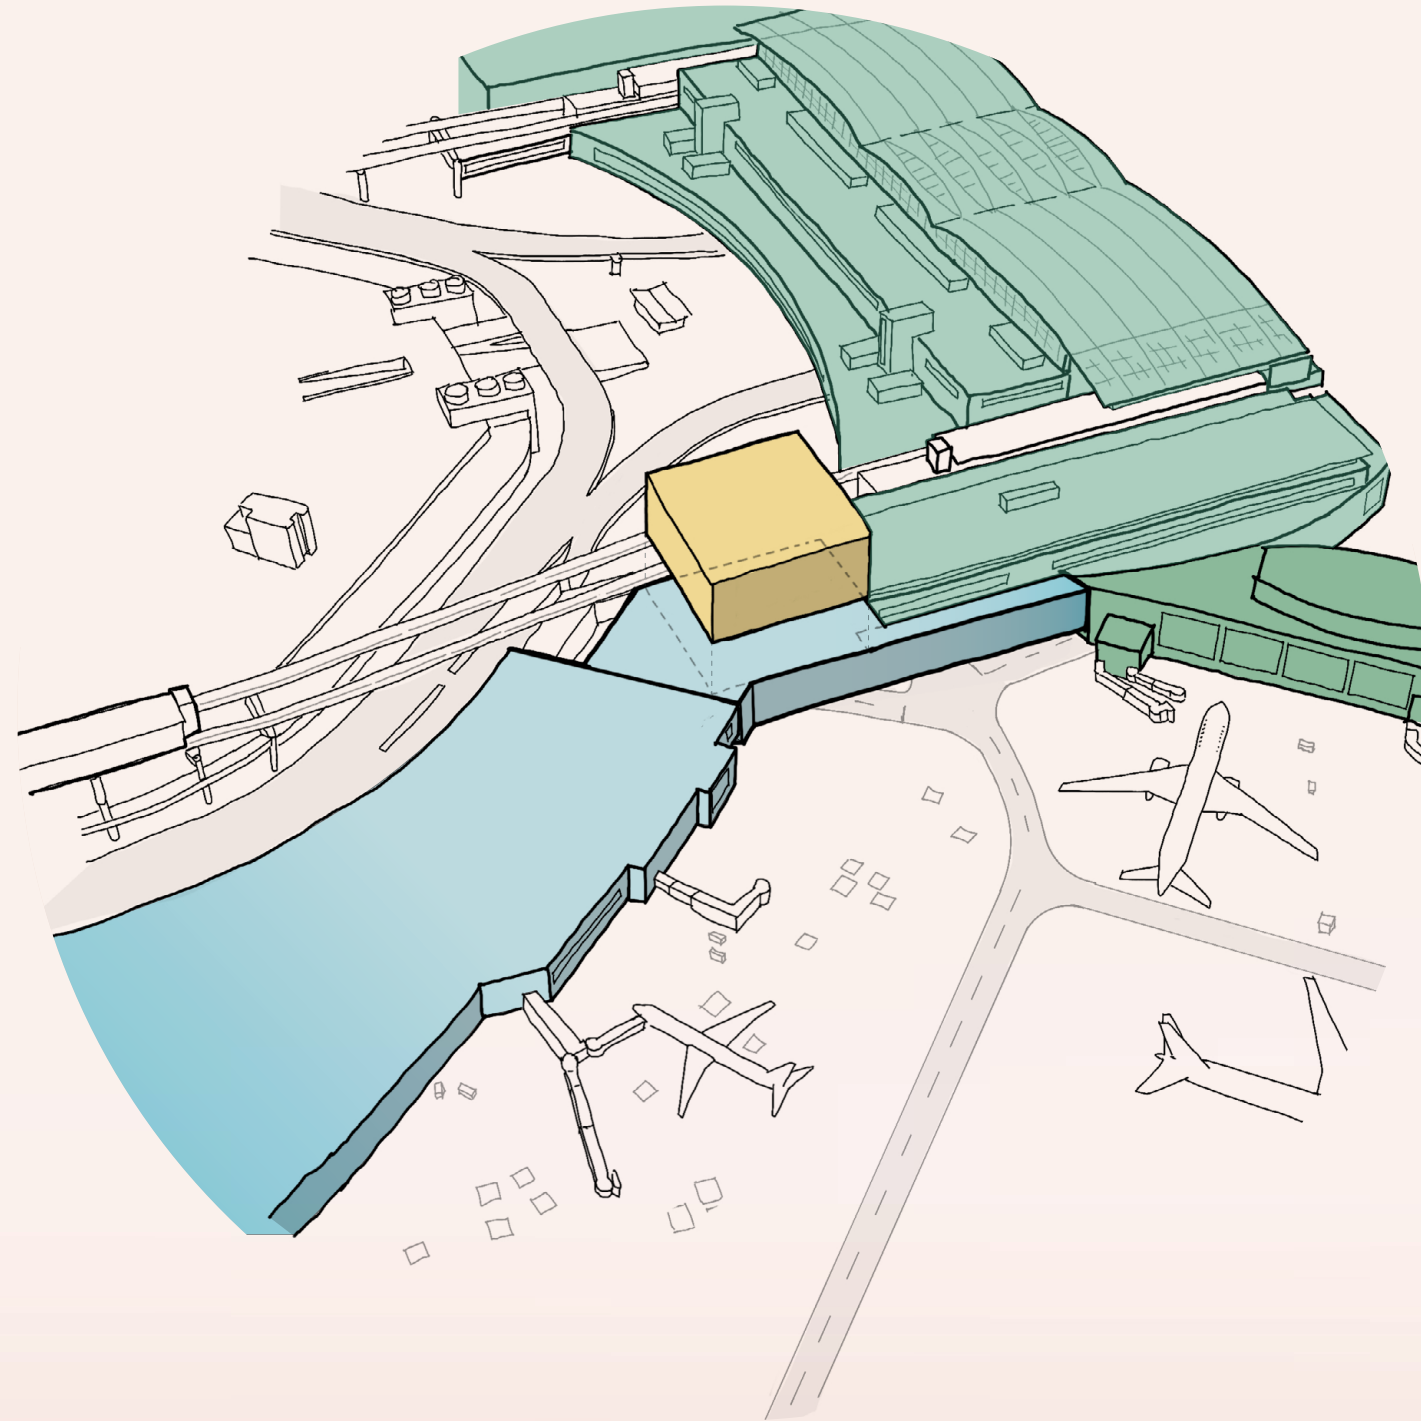

Provide New Airline Lounge Space to meet passenger demand

5

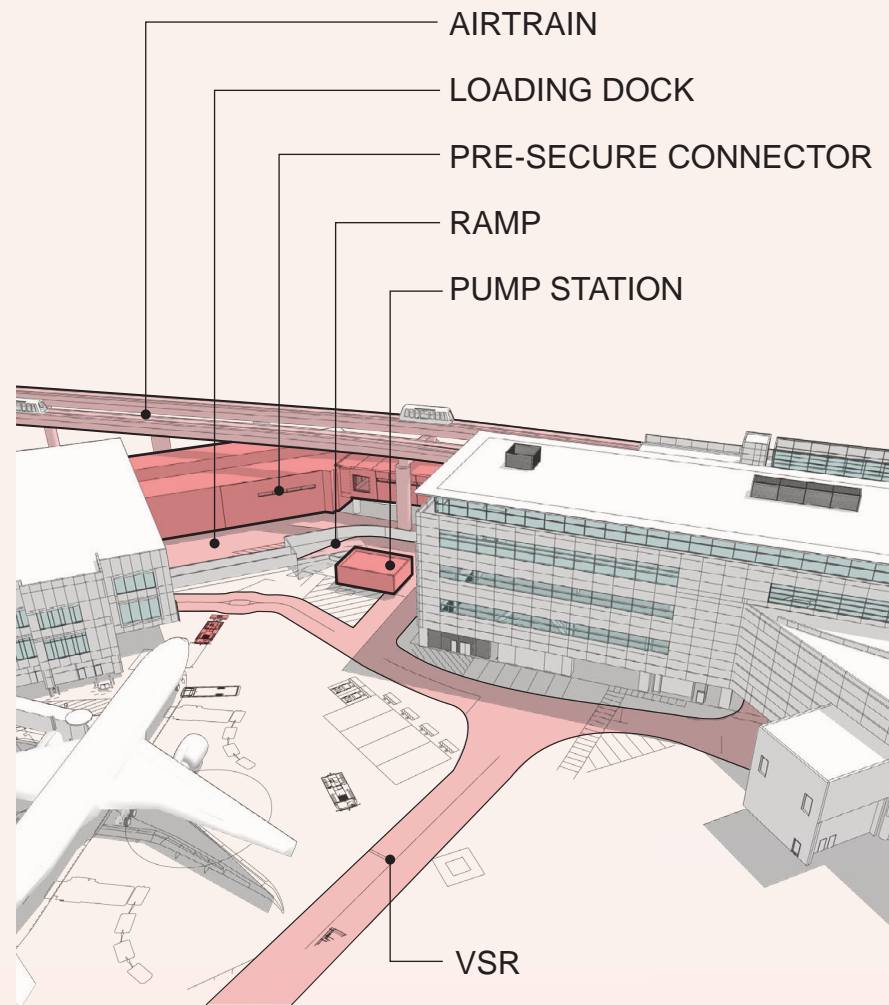

Maintain Airport Operations and Infrastructure at Ground Level

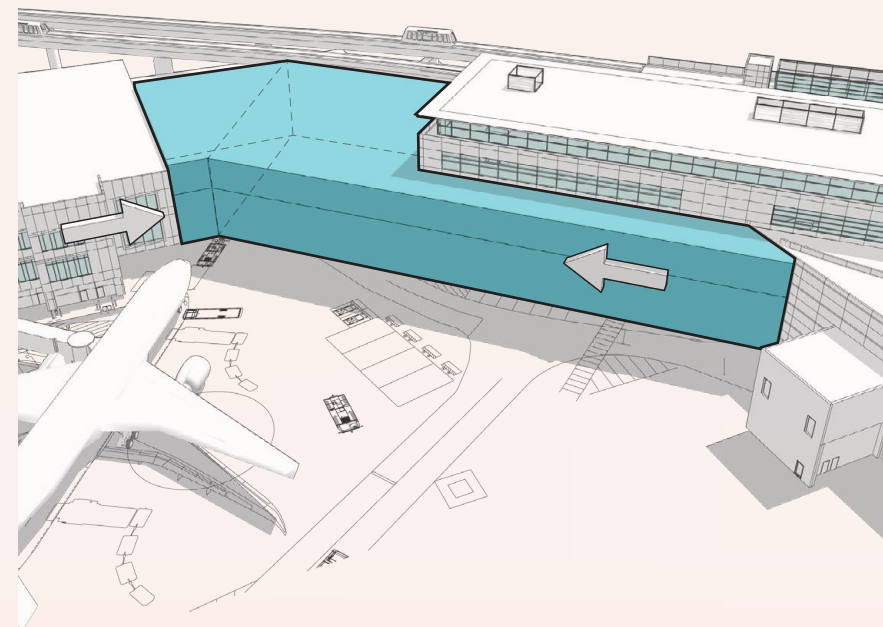

C4C seamlessly integrates into the airport's existing hierarchy, acting as a spatial link between terminals while incorporating a mix of passenger and tenant functions. Similar to the main ring on a keychain, the terminals retain their hierarchical significance, with C4C serving as a pivotal connection and punctuation, reinforcing the airport's narrative and its established structure.
